## Guidelines for Parcels North of Latitude $60^{\circ} \mathrm{N}$

These guidelines summarize the land description system for parcels north of latitude $60^{\circ} \mathrm{N}$. For more detailed information see section 4 of the Canada Oil and Gas Land Regulations. [Geographic coordinates are referenced to North American Datum 1927 (NAD27).]
Land areas are divided into grids, grids into sections, and sections into units.
Grids are bounded to the east and west by successive meridians of longitude:

- for lands south of latitude $70^{\circ} \mathrm{N}$, the boundaries are spaced every $15^{\prime}$ of longitude (e.g., $122^{\circ} 00^{\prime} \mathrm{W}$ and $122^{\circ} 15^{\prime} \mathrm{W}$ ), or
- for lands north of latitude $70^{\circ} \mathrm{N}$, the boundaries are spaced every $30^{\prime}$ of longitude (e.g., $122^{\circ} 00^{\prime} \mathrm{W}$ and $122^{\circ} 30^{\prime} \mathrm{W}$ ).

To the north and south, the boundaries of grids are defined by straight lines joining the points of intersection of their east and west boundaries with successive parallels of latitude spaced every $10^{\prime}$ (e.g., $60^{\circ} 00^{\prime} \mathrm{N}$ and $60^{\circ} 10^{\prime} \mathrm{N}$ ). Every grid area is referred to by the latitude and longitude coordinates of its northeast corner (e.g., $60^{\circ} 10^{\prime} \mathrm{N}$, $122^{\circ} 00 '$ W).

The number of sections into which a grid is divided depends on the latitude where the grid is located.

A section is bounded to the east and west by meridians:

- for lands between latitudes $70^{\circ} \mathrm{N}$ and $75^{\circ} \mathrm{N}$, the boundaries are spaced at intervals of $1 / 10$ of the distance between the east and west boundaries of the grid area, or
- for lands between $60^{\circ} \mathrm{N}$ and $68^{\circ} \mathrm{N}$, and between $75^{\circ} \mathrm{N}$ and $78^{\circ} \mathrm{N}$, they are spaced at intervals of $1 / 8$ of this distance, or
- for lands between $68^{\circ} \mathrm{N}$ and $70^{\circ} \mathrm{N}$, and between $78^{\circ} \mathrm{N}$ and $85^{\circ} \mathrm{N}$, they are spaced at intervals of $1 / 6$ of this distance.

Fig: 1 Sample grid with 80 sections

| 80 | 70 | 60 | 50 | 40 | 30 | 20 | 10 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  | 39 |  |  |  |
|  |  |  |  | 38 |  |  |  |
|  |  |  |  | 37 |  |  |  |
|  |  |  |  | 36 |  |  |  |
| 75 | 65 | 55 | 45 | 35 | 25 | 15 | 5 |
|  |  |  |  | 34 |  |  |  |
|  |  |  |  | 33 |  |  |  |
|  |  |  |  | 32 |  |  |  |
| 71 | 61 | 51 | 41 | 31 | 21 | 11 | 1 |

To the north and south, the boundaries of sections are defined by straight lines drawn parallel to the north and south boundaries of the grid and spaced at intervals of $1 / 10$ of the distance between these boundaries.

Thus, grids have 100, 80 or 60 sections ( $10 \times 10,8 \times 10$, or $6 \times 10$ ) depending on their location.
The sections are numbered and each is referred to by its number (see Figure 1).

Every section is divided into 16 equal units, each of which is identified by a letter (see Figure 2).

Fig: 2 Units in a section

| $M$ | $N$ | $O$ | $P$ |
| :--- | :--- | :--- | :--- |
| $L$ | $K$ | $J$ | I |
| $E$ | $F$ | $G$ | $H$ |
| $D$ | $C$ | $B$ | $A$ |
